

BIOCERA VET
The next generation bone substitute

BONE SURGERY RTU

1cc

3cc

FEATURES

- Final composition similar to natural bone
High quality α -tricalcium phosphate and ortho-phosphate salts crystallizing into calcium-deficient apatite
- Porous architecture supporting cell migration and promoting bone remodeling
- High mechanical resistance

INDICATIONS

- Arthrodesis
- Fracture
- Corrective osteotomy
- TTA (Tibial Tuberosity Advancement)
- All indications requiring bone grafting

BENEFITS

- High clinical performance
- Safe, no complications
- Ready-to-use highly injectable, fast-hardening
- Well suited for minimally invasive & complex surgeries
- Time & cost-saving
- Clinically proven alternative to autograft

BIOCERA VET

The next generation bone substitute

BONE SURGERY SMARTGRAFT

Ultra Fine
0.25-1mm

1cc

3.5cc

Fine
1-2mm

2.5cc

5cc

INDICATIONS

- Arthrodesis
- Fracture
- Corrective osteotomy
- TTA (Tibial Tuberosity Advancement)
- All indications requiring bone grafting

FEATURES

- Fast integration and complete remodeling
- Combination of bovine mineral bone matrix, bioresorbable polymers and collagen fragments
- Interconnected microstructure for optimal osteoconduction
- High wettability and hydrophilicity for fast bone formation

BENEFITS

- High clinical & functional performance
- Safe, low complication rate
- From product-to-product sustained quality
- Most cost-effective alternative to allografts

BIOCERA VET
The next generation bone substitute

BONE SURGERY GRANULES

INDICATIONS

- Arthrodesis
- Fracture
- Corrective osteotomy
- TTA (Tibial Tuberosity Advancement)
- All indications requiring bone grafting

FEATURES

- Calcium-deficient apatite crystalline structure & porosity similar to natural bone
- Biocompatible & resorbable
- Price-conscious solution

BENEFITS

- Safe & affordable
- Optimal osteoconduction
- Complementary to auto- and allograft procedures

BIOCERA VET

The next generation bone substitute

OSTEOSARCOMA RTU

12cc

2*12cc

FEATURES

- High injectability and long workability for an easy use
- Fast-hardening and high mechanical resistance
- Reduced risk of pathological fractures and relieved pain
- Radiopacity enabling monitoring of injection

INDICATIONS

- Cementoplasty (osteosarcoma, other bone tumors or any intra-osseous bone strengthening procedure)
- Large bone gaps filling

BENEFITS

- Improved quality of life and immediate pain relief
- Reduced risk of pathological fracture
- Minimally-invasive
- Rapid recovery & limited post-operative care
- Cost-effective
